11.2 Additional information

Carcinogen classification:

No indication of carcinogenicity to humans (not listed by IARC).

Exposure routes:

Well absorbed from the gastrointestinal tract (> 95%). The presence of food reduces the rate but not the extent of absorption. Hepatic first pass metabolism reduces bioavailability to 45-70% following administration of a single dose, but increases to 80% with multiple dosing as a result of saturation of the first pass effect. Peak plasma concentrations are reached within 1 - 2 hours following oral administration.
