Oral absorption is dose dependent in adults and leukemic pediatric patients. In adults, peak serum levels are reached within one to two hours. At doses of 30 mg/m² or less, methotrexate is generally well absorbed with a mean bioavailability of 60%. At doses greater than 80 mg/m², the absorption of the doses is significantly less due to a saturation effect.

Signs and symptoms of exposure:

Symptoms of overdose include bone marrow suppression and gastrointestinal toxicity.
